Rate of Return (continued)

Your Personal Rate of Return: Your Personal Rate of Return measures the investment performance of your account. It incorporates the timing of your additions and withdrawals and reflects commissions and fees paid. Reviewing Your Personal Rate of Return is important to help ensure you're on track to achieving your financial goals.

Performance Benchmarks: Your Personal Rate of Return should be compared to the return necessary to achieve your financial goals. However, we understand many investors would like to compare their Personal Rate of Return to market indexes. Keep in mind this may not be an accurate comparison, as your Personal Rate of Return incorporates the timing of your specific additions and withdrawals and your specific investment mix, while published returns of market indexes do not.

These market indexes are used as a general measure of market performance for several major asset classes. Market indexes assume reinvestment of all distributions and do not take into account brokerage fees, taxes or investment management fees.

The performance of your investments is tracked since they have been held in the current account, but no earlier than Jan.1, 2009. This also includes investments you owned during this time period but have since sold. Certain events, including a transfer of an investment between accounts, share class conversion, or change in an investment's identification code (CUSIP) caused by a corporate action, will impact the time frame over which the investment's rate of return is calculated.

Rate of Return information on account statements uses the dollar-weighted calculation. Time-weighted Rate of Return numbers for Advisory Solutions Fund and UMA accounts can be found on your Quarterly Performance Report through Online Account Access. If you are not an Online Access user, visit edwardjones.com/access to sign up.

Information used to calculate performance may have been obtained from third parties and Edward Jones cannot guarantee the accuracy of such information.

For the most current information, contact your financial advisor or visit edwardjones.com/performance.

Rate of Return Indexes Definitions

S&P 500 Index: A broad-based measurement of changes in stock market conditions based on the average performance of 500 widely held common stocks. While many of the stocks are among the largest, this index also includes many relatively small companies. It is a float adjusted capitalization-weighted index (stock price times number of publicly available shares outstanding), calculated on a total return basis with dividends reinvested.

MSCI EAFE Index: A market weighted index maintained by Morgan Stanley Capital International composed of foreign stocks from developed markets (excluding the U.S. and Canada).

Bloomberg Aggregate Bond Index: Measures the performance of government, mortgage-backed, asset-backed and corporate securities with at least one year to maturity.

Cost basis is the amount of your investment for tax purposes and is used to calculate gain or loss upon sale or other disposition of a security. It is not a measure of performance. The cost basis amounts on your statement should not be relied upon for tax preparation purposes. Cost basis information may be from outside sources and has not been verified for accuracy. Refer to your official tax documents for information about reporting cost basis. Consult a qualified tax advisor or an attorney regarding your situation. If you believe the cost basis information is inaccurate, contact Client Relations.
